

Process and Device for Visual Display of Information in Motor Vehicles

Patent Claims

1. Process for visual display of information in motor vehicles with an electronically controllable display, where the display is controlled in such a manner that at least two sets of information, having an interrelated effect, are displayed as a comparison by graphical representation, characterized in that the information is displayed at the same place alternating with the same type of graphics, but with different labels.
2. Process, as claimed in patent claim 1, characterized in that the information is displayed with a bar graph.
3. Process, as claimed in patent claim 1 or 2, characterized in that the information is displayed in different colors or intensity of illumination (light/dark).
4. Indicator for visual display of information in motor vehicles with an electronically controllable display, where there are means to control the display in such a manner that at least two sets of information, having an interrelated effect, are displayed as a comparison by graphical representation, characterized in that the information is displayed at the same place alternating with the same type of graphics, but with different labels.
5. Indicator, as claimed in patent claim 4, characterized in that the information is displayed with a bar graph.
6. Indicator, as claimed in patent claim 4 or 5, characterized in that the information is displayed in different colors or intensity of illumination (light/dark).
